Summary

Full stack engineer with 5 years taking software from ambiguous requirements to production for US and Latin American clients in AI, fintech and healthtech. As founding engineer and CTO of Docguía, I built a healthcare platform to 7,000+ daily active users, deploying LLM agents, clinical workflows and pharmacy integrations under real-world constraints like unreliable local infrastructure. Before that, I was the client-facing engineer embedded with Replicant, raising automated call resolution from 18% to ~50%, and delivered the public platform of TradeStation, a FINRA-regulated US brokerage. I own the customer relationship, the code and the outcome.

Experience

Docguía | Founding Engineer & CTO · Remote · Aug 2025 - Oct 2026

Healthcare platform for medical specialists: EMR, digital prescriptions, scheduling, payments and pharmacy integrations

- Took the platform from zero to 7,000+ daily active users, owning architecture end to end: Next.js and Django on AWS ECS, PostgreSQL on RDS, CloudWatch observability.
- Deployed LangChain-powered AI features into live medical consultations, translating physician workflows into AI-assisted clinical documentation.
- Building an in-consultation copilot with LangGraph that coordinates multiple physician-requested actions across the clinical workflow.
- Shipped LLM-powered WhatsApp agents for sales and patient communication, plus Meta Conversions API attribution for the click-to-WhatsApp funnel, enabling per-campaign ROI tracking.
- Diagnosed recurring connection failures affecting users on unreliable local ISPs and eliminated them with a Cloudflare routing layer in front of Vercel.
- Shipped the React Native (Expo) app to the App Store and Google Play, owning the full release pipeline from EAS builds to store review.

- Defined the North Star metric and freemium strategy, and built the analytics stack (Metabase over read-only Postgres replicas) behind product and growth decisions.
- Led a team of four developers: set technical direction, reviewed code and delivered clinical workflows and integrations.

PeakActivity | Software Engineer (client: TradeStation) · US (Remote) · Mar 2025 - Aug 2025

- Delivered the reusable component system behind TradeStation's public website (FINRA-regulated US brokerage): Next.js components integrated with Contentstack so the client's marketing team publishes pages across dozens of templates without engineering support.
- Co-delivered the full component library with one other engineer, standardizing design tokens and content models across the site's six major sections.

Alluxi | Software Engineer · Remote · Jul 2023 - Mar 2025

- Designed a Next.js and Django architecture supporting 100,000+ active users without performance bottlenecks.
- Built an AI-driven recruitment platform that increased hiring efficiency by 50% through intelligent automation.
- Implemented a real-time auction system with WebSockets, reducing latency by 35%; cut page load times by 40% with SSR/SSG, code splitting and rendering optimization.

Encora | Software Engineer I & II · Remote · Sep 2021 - Jul 2023

Embedded with client Replicant (conversational AI for contact centers), Mar 2022 - Mar 2023

- Served as primary technical liaison with the client, maintaining 90%+ satisfaction across a year of weekly deliveries.
- Raised automated call resolution from 18% to ~50% by iterating on conversation flows and prioritizing features against production data.
- Introduced a unit testing system that cut deployment time and production errors by 25%.
- Led backend improvements on an internal task platform, migrating from NestJS to HapiJS and reducing load times by 35%. Selected from Encora's 6-month engineering academy for full-time employment.

Skills

- **Applied AI:** LangChain, LangGraph, LLM agents in production, prompt engineering, WhatsApp/conversational agents
- **Frontend:** React, Next.js, TypeScript, React Native, Expo, Tailwind
- **Backend & integrations:** Node.js, tRPC, Django, Python, REST APIs, WebSockets, third-party integrations
- **Infrastructure & data:** AWS (ECS, RDS, S3, CloudWatch), PostgreSQL, Redis, Docker, Cloudflare, Vercel, CI/CD, Metabase
- **Client-facing:** Technical liaison, requirements scoping, weekly delivery to clients, team leadership
- **Languages:** Spanish (native), English (professional working proficiency)
