Nicolás Restrepo

Senior Software Engineer | React, Next.js, TypeScript, Node, Django

nrestrepo.r05@gmail.com · +57 316 842 6220 · linkedin.com/in/nicorr05 · github.com/nicorr-05 · Remote (GMT-4)

Summary

Senior full stack engineer with 5 years shipping production systems for AI, fintech and healthtech companies in the US and Latin America. Most recently built a healthcare platform serving 7,000+ daily active users as founding engineer, owning everything from AWS infrastructure to mobile apps in both stores, along with the product decisions behind them. Previously delivered the public platform of TradeStation, a FINRA-regulated US brokerage, and systems supporting 100,000+ users. Looking to bring that end-to-end ownership to a strong product team.

Experience

Docguía | Founding Engineer & CTO · Remote · Aug 2025 - Oct 2026

Healthcare platform for medical specialists: EMR, digital prescriptions, scheduling, payments and pharmacy integrations

- Architected and built the platform from zero to 7,000+ daily active users: Next.js and Django on AWS ECS, PostgreSQL on RDS, observability through CloudWatch.
- Shipped the React Native (Expo) app to the App Store and Google Play, owning the full release pipeline including EAS builds and store review cycles.
- Built LangChain-powered AI features for medical consultations, supporting clinical documentation and physician workflows.
- Building an in-consultation copilot with LangGraph to coordinate multiple physician-requested actions across the clinical workflow.
- Designed LLM-powered WhatsApp agents for sales and patient communication, plus Meta Conversions API attribution for the click-to-WhatsApp funnel, enabling per-campaign ROI tracking.
- Defined the company's North Star metric, designed the freemium strategy, and built the analytics stack (Metabase over read-only Postgres replicas) that drives product and growth decisions.

- Eliminated recurring connection failures for users on unreliable local ISPs by architecting a Cloudflare routing layer in front of Vercel.
- Led a team of four developers through end-to-end platform implementation, setting technical direction, reviewing code, and delivering clinical workflows and integrations.

PeakActivity | Software Engineer (client: TradeStation) · US (Remote) · Mar 2025 - Aug 2025

- Built the reusable component system powering TradeStation's public website (a FINRA-regulated US brokerage), architecting Next.js components integrated with Contentstack so the client's marketing team could assemble and publish pages across dozens of templates without engineering support.
- Co-delivered the full component library with one other engineer, standardizing design tokens and content models across the site's six major sections.

Alluxi | Software Engineer · Remote · Jul 2023 - Mar 2025

- Designed a scalable architecture with Next.js and Django supporting 100,000+ active users without performance bottlenecks.
- Developed an AI-driven recruitment platform, increasing hiring efficiency by 50% through intelligent automation.
- Implemented a real-time auction system using WebSockets, reducing latency by 35%.
- Cut page load times by 40% through SSR/SSG strategies, code splitting and rendering optimization in React/Next.js.

Encora | Software Engineer I & II · Remote · Sep 2021 - Jul 2023

Embedded with client Replicant (conversational AI), Mar 2022 - Mar 2023

- Raised automated call resolution from 18% to ~50% by iterating on conversation flows and prioritizing features against production data.
- Acted as primary technical liaison with the client, maintaining 90%+ satisfaction across a year of weekly deliveries.
- Introduced a unit testing system that cut deployment time and production errors by 25%.
- Led improvements in an internal task management platform, migrating the backend from NestJS to HapiJS and reducing load times by 35%.
- Selected from Encora's intensive 6-month engineering academy for full-time employment.

Skills

- **Frontend:** React, Next.js, TypeScript, React Native, Expo, Tailwind
- **Backend:** Node.js, tRPC, Django, Python, REST APIs, WebSockets
- **Infrastructure:** PostgreSQL, Redis, Docker, AWS (ECS, RDS, S3, CloudWatch), Cloudflare, Vercel, CI/CD
- **AI & Content:** LangChain, LangGraph, LLM agents in production, prompt engineering, Contentstack, Metabase analytics
- **Languages:** Spanish (native), English (professional working proficiency)
