Summary

Tech lead and full stack engineer with 5 years shipping production systems for US and Latin American companies in AI, fintech and healthtech. As founding engineer and CTO of Docguía, I set the technical direction and led a team of four developers that took a healthcare platform from zero to 7,000+ daily active users, while staying hands-on across architecture, code and releases. I connect engineering decisions to product and business outcomes: I defined the North Star metric, owned the analytics behind growth decisions, and worked directly with clients as a technical liaison.

Experience

Docguía | Founding Engineer & CTO · Remote · Aug 2025 - Oct 2026

Healthcare platform for medical specialists: EMR, digital prescriptions, scheduling, payments and pharmacy integrations

- Led a team of four developers through end-to-end platform implementation: set technical direction, reviewed code, and delivered clinical workflows and integrations.
- Owned the architecture that took the platform from zero to 7,000+ daily active users: Next.js and Django on AWS ECS, PostgreSQL on RDS, CloudWatch observability.
- Defined the North Star metric and freemium strategy, and built the analytics stack (Metabase over read-only Postgres replicas) that drove product and growth decisions.
- Led the delivery of LangChain-powered AI features into live medical consultations and an in-consultation copilot with LangGraph that coordinates multiple physician-requested actions.
- Shipped LLM-powered WhatsApp agents for sales and patient communication, with Meta Conversions API attribution enabling per-campaign ROI tracking.
- Diagnosed recurring connection failures for users on unreliable local ISPs and eliminated them with a Cloudflare routing layer in front of Vercel.

- Owned the full mobile release pipeline, shipping the React Native (Expo) app to the App Store and Google Play.

PeakActivity | Software Engineer (client: TradeStation) · US (Remote) · Mar 2025 - Aug 2025

- Architected the reusable component system behind TradeStation's public website (FINRA-regulated US brokerage): Next.js components integrated with Contentstack so the client's marketing team publishes pages across dozens of templates without engineering support.
- Co-delivered the full component library with one other engineer, standardizing design tokens and content models across the site's six major sections.

Alluxi | Software Engineer · Remote · Jul 2023 - Mar 2025

- Designed a Next.js and Django architecture supporting 100,000+ active users without performance bottlenecks.
- Built an AI-driven recruitment platform that increased hiring efficiency by 50% through intelligent automation.
- Implemented a real-time auction system with WebSockets, reducing latency by 35%; cut page load times by 40% with SSR/SSG, code splitting and rendering optimization.

Encora | Software Engineer I & II · Remote · Sep 2021 - Jul 2023

Embedded with client Replicant (conversational AI), Mar 2022 - Mar 2023

- Served as primary technical liaison with the client, maintaining 90%+ satisfaction across a year of weekly deliveries.
- Raised automated call resolution from 18% to ~50% by prioritizing features against production data.
- Introduced a unit testing system that cut deployment time and production errors by 25%.
- Led backend improvements on an internal task platform, migrating from NestJS to HapiJS and reducing load times by 35%.

Skills

- **Leadership:** Technical direction, code review, team delivery, client liaison, metrics and analytics-driven decisions
- **Frontend:** React, Next.js, TypeScript, React Native, Expo, Tailwind

- **Backend & integrations:** Node.js, tRPC, Django, Python, REST APIs, WebSockets, third-party integrations
- **Infrastructure & data:** AWS (ECS, RDS, S3, CloudWatch), PostgreSQL, Redis, Docker, Cloudflare, Vercel, CI/CD, Metabase
- **Applied AI:** LangChain, LangGraph, LLM agents in production, prompt engineering
- **Languages:** Spanish (native), English (professional working proficiency)
